Tierärztlicher Bericht

Pferd: Incredible Simoni, Pferd, Traber
Besitzer: Katarzyna Christensen, Dobropole 127, 72-510 Wolin
Kunden-Nr. 2095416, Patienten-Nr. 2104697

The above mentioned horse was presented to the Clinic on the 30th of March for arthroscopic removal of OCD fragments from the both hocks (Tarsocrural joints) and to remove small distal fracture fragments of both splintbones of the left forelimb.

Surgery was without complications and recovery was uneventful.

Both OCD fragments were completely removed and no other lesions were identified during arthroscopy. Splintbone fragments were completely removed. Suspensory ligament on the left fore was normal on palpation and on ultrasound.

The athletic function of this horse should not be affected after surgery and the prognosis for a race horse is good.

Chr. Lischer
