ANIMAL

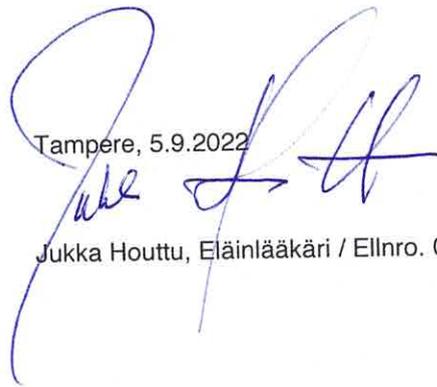

ECUADOR COMBO (35529)
Hevonen, lämminverinen
Born: 1.1.2021
Gender: Ori

Veterinary certificate

The horse Ecuador Combo had osteochondral fragments on the middle malleolus of the left hock.
The horse was arthroscopically operated on Tampere Equine Clinic 30.8.2022.
The fragments were taken out. The cartilage in the joint was normal.

According to my understanding prognosis to the racing animal is good.

Tampere, 5.9.2022
