Anamnes

Request for arthroscopy of the RH and LH tibiotarsal joints.

Diagnoser

Osteokondros OCD DIRT RH and LH- arthro TTJ.

Medskickat**Journal**

2024-02-27 Surgery: dorsal recumbence. Arthroscopy of the RH and LH tibiotarsal joints (TTJ),
Operation RH TTJ- OCD at the level of the distal intermediate ridge of the tibia, 1 fragment circa 6 mm large in
KaBa the OCD bed. Rest of the joint is intact.
LH TTJ- OCD at the level of the distal intermediate ridge of the tibia, 1 fragment circa 20 mm large in
the OCD bed. Rest of the joint is intact.
The fragments were removed and the OCD bed debrided with sharp curettage and shaver. Joints
were thoroughly lavaged with sterile saline. Arthroscopic portals were sutured with Monocryl 2
-0USP/3M using simple interrupted suture pattern. High limb bandages were placed on
postoperatively. Uneventful spontaneous recovery from the general anesthesia.

NSAID (Rheumocam) orally for 5-7 days. Bandage change every 5-7 days (based on how the
bandage looks like) for a total period of 3 weeks post op.

Suture removal: in 2 weeks under strictly aseptic manner (following chlorhexidine or povidone iodide
scrub). Afterwards place again a single layer bandage on for additional 5-7 days.

Complete boxrest for 3 weeks (as long as the horse has a bandage on). Start with controlled
handwalking exercise for 5-10 minutes per day on week 4, and add extra 5-10 minutes every other
week (20 minutes on week 5, etc) to end up on 50 minutes of handwalking on week 8. Afterwards the
horse can slowly resume normal exercise/be turned out into a large paddock.

2024-02-27 Status:
Journal HR 44bpm, RR 20/min, T 38.1
MaJa Heart auscultation: no murmurs, no irregularities
Lung auscultation: normal vesicular costo-abdominal breath sounds

SLAKTKARENS:

Startkarens gäller i enlighet med respektive förbunds regler.

Om något oförutsett händer under icke ordinarie öppettid och som har samband med hästens behandling,
ring 08-592 540 10. **Vid feber eller svullnad i behandlad led bör du ringa till kliniken omgående.**

Häst **Kajser Ima**

ID 107822

Sid 2/2

V. jugularis normal, lymph nodes normal, mucosa pink and moist, CRT<2s
GI sounds normal on both sides

2024-03-02 Scannat finns, AR2024FEB27-9_58_2.pdf.
