

In Person (591395)

Hingst, Född 07-02-23

Operation 20-02-2024: Fetlock joint arthroscopy LF (Kotled VF), dorsal osteochondral fragment (DOF) proximal-medial P1. Diagnostic arthroscopy Tarsocrural joint (TCJ, Hasled) LH/VB.

Fetlock LF (Kotled VF): Routine approach to the dorsal fetlock. DOF fragment removed from the dorso-medial border of P1. Subchondral bone debrided. Normal cartilage in the remainder of the joint.

TCJ LH/VB (Hasled VB): No fragment present on the distal intermedia ridge of the tibia, however there was swelling and soft superficial indentations of the cartilage (Grade 1). Very small superficial wear line on the lateral trochlear ridge.

The prognosis is good and the operation is not expected to affect the performance of the horse in the future.
