Operation 28-04-2025: Diagnostic arthroscopy of the Fetlock joints RH/LH (HB/VB) and Tarsocrural joint (TCJ/Hasled) LH (VB); OCD medial malleolus of the Tibia RH (HB).

TCJ RH (Hasled HB): Fragment removed from the medial malleolus of the Tibia and subchondral bone curetted. Normal cartilage in the remainder of the joint.

TCJ LH (Hasled VB): No fragments in the joint. Normal cartilage.

Fetlock RH (HB): No fragment in the proximo-plantar-lateral aspect of P1, however clear defect in the cartilage with exposed healthy subchondral bone. Sharp edge of the base of the lateral sesamoid. Normal short sesamoid ligament. Normal cartilage in the remainder of the joint.

Fetlock LH (VB): Small cartilage defect on the proximal sagittal ridge MTIII and mild swelling of the cartilage, but no fragment present. Normal cartilage in the remainder of the joint.

The prognosis is good and the operation is not expected to affect the performance of the horse in the future.
