Kliniska Anteckningar

Allmän Leg. Dss. Per-Erik Westöö 2026-06-17 10:39

Alexandra stall Conrads lämnar in hästen. Passet ej med men hon hälsar att hästen är fullvaccinerad gällande tetanus.

Allmän Leg. Vet. Bartłomiej Obrochta 2026-06-18 12:26

Microchip was checked
752098200011314

Clinical examination within the normal physiological ranges.

Modearte distention of the right TCJs.

Arthroscopic Removal of medial malleolus OCD fragment from the right TCJ:

The horse was anaesthetised and placed in dorsal recumbency, with the right hindlimb secured in mild hock extension.

Surgical area was clipped, cleaned, and draped in a routine sterile manner.

The right TC joint was distended with 80 ml of Ringer's lactate solution, and a routine dorsomedial camera portal was established. Arthroscopic evaluation revealed a presence of medial malleolus OCD fragment with no concurrent cartilage damage visible.

Instrument portal was created distal and medial to the camera portal under the arthroscopic guidance. Medial malleolus defect was elevated and removed with arthroscopic ronger. The area was debrided with a surgical curette until the healthy subchondral bone.

Joint cavity was copiously lavaged and arthroscopic portals were closed with simple interrupted sutures using 2-0 USP Monocryl.

A double-layer hock bandage was applied.

The horse recovered well from general anaesthesia.

CC: BO contacted Alexandra about the findings.

Ingripanden/Behandlingar

Behandling	Mängd	Datum
Besöksavgift	1	2026-06-17 10:37
Artroskopi 1 led	1	2026-06-18 14:09

Röntgen uppföljning, enkla

Report

DLPMO and DP views of the left TCJ were taken, this did not reveal any bone abnormalities.
