Discharge document

Patient: In Succes (Pferd, Traber)
Owner: Kurt Pritsch, Papenhuderstraße 39, 22087 Hamburg
Kd-Nr.: 1248772 Tier-Nr.: 2109878

History

„In Succes“ was referred for arthroscopic removal of an osteochondral fragment at the distal intermediate ridge left talocrural joint.

Examination

General examination

The horse was bright and alert with all vital parameters within normal limits.

Diagnose

Left talocrural joint: Osteochondral fragment at the distal intermediate ridge of the tibia.

Treatment

The fragment was removed arthroscopically in general anesthesia. Succesfull removal was confirmed radiographically.

Discharge management

Housing: Box rest for 2 weeks, followed by 2 weeks of small paddock.

Exercise: Grazing on hand for 2 weeks, followed by handwalking for 6 weeks. Start with 10min once or twice daily and increase walking by 5min per week.

Feeding: As usual.

Medication: Flunixin or Meloxicam once daily for 5 days.

Additional recommendations: Please check for temperature, weight bearing and lameness daily. The bandage should be changed every 3-4 days by your veterinarian. Skin sutures can be removed by your veterinarian on 10 June 2026.

Follow-up examination: In 8 weeks by your veterinarian.
