Operationsberättelse - 2026-04-16, Skapad av Djursjukskötare NGN, Senast ändrad av Leg Veterinär, resident kirurgi CJI

Surgery - bilateral OCD TCJ

Surgeon: Carlos Jimenez Resident: Anna Lindqvist

Horse placed in dorsal recumbency under general anaesthesia. Local anaesthesia according to the joint study (blinded). Routine approach to the dorsal aspect TCJ. LH multiple free fragments removed. Plantar aspect with 4-5 wear lines, some partial thickness and some full thickness in the medial trochlear ridge. Procedure repeated in RH, a large size firmly attached fragment removed. Plantar aspect without remarks. Complete removal of all fragments confirmed radiographically. Portals closed with 2-0 polypropylene SI. Hock bandages placed.
